

Version History

Auto Char Styles

1.6.0

- Optimized script performance (runs approximately 4× faster).

1.7.0

- Added option to create populated character styles.

1.8.0

- Added “Create blank styles” checkbox and an About button.

1.8.1

- Fixed progress bar issue on macOS.

1.9.0

- Added option to skip text that already has a character style applied.

2.1.0

- Fixed character style override behavior.

2.2.0

- Fixed alignment of the main panel in the UI; added “Basic Definition” dropdown and related routines.

2.3.0

- Fixed issue where choosing only Style caused character style to store font family; added savable presets.

2.4.0

- Updated About button to version 1.2 and fixed progress bar with proper update handling.

2.5.0

- Preset storage moved to userData for macOS compatibility; fixed preset removal bug in CC2015.

2.5.5

- In a very specific case, where the option to compare text to the “most visually prominent formatting in each paragraph” was selected, and where a single paragraph contained two or more text runs whose only difference was that they were formatted with Regular, Caption, Display or Subhead styles, an infinite loop would be triggered.
