

Version History

FormMaker Pro

Version 4.1.1

- Tab Order Fix: Fields containing multiple widgets were incorrectly identified, causing tabbing issues.

Version 4.1.0

- New Set Tab Order window: The tab order of fields can now be easily sorted by row, column, and more.
- Smarter Field Finding: The way all form fields on pages are found has been improved, even in complex layouts.

Version 4.0.14

- Checkbox Placement Fix: An issue where checkboxes could move unexpectedly, especially when a document's ruler origin wasn't set to "Spread," has been resolved.

Version 4.0.13

- Rich Text Fix: A bug that prevented Rich Text formatting from working correctly in text frames that didn't contain any characters has been fixed.

Version 4.0.12

- Calculation and Mask Fix: Calculations and custom masks now work correctly, even with field names that include dollar signs (\$).

Version 4.0.11

- Anchored Field Fix: A crash that could occur when fields were anchored to overset text has been fixed.
- Checkbox/Radio Button Data: Checkbox and radio button export values are now applied correctly in Acrobat.

Version 4.0.10

- Font Mapping: "ArialMT" is now automatically mapped to "Arial," simplifying font handling.
- Export Dialog Default: The "Show Export Dialog" option is now checked by default.

Version 4.0.9

- Font Embedding Fix: An issue where fonts weren't always embedded correctly in Acrobat has been addressed.
- Rich Text and Custom Format: Rich Text and Multiline options can now be used with the "Custom" format setting.
- List/Combo Box Improvements: List boxes and combo boxes now reset their selected values correctly, and items are applied more reliably.

Version 4.0.8

- Font Compatibility Fix: A bug related to applying fonts to form fields has been fixed.

Version 4.0.7

- Font Embedding Workaround: A temporary workaround to ensure fonts are embedded correctly in Acrobat has been implemented.

Version 4.0.6

- Color Handling Improvements: How different color types (Pantone, etc.) are handled in form fields has been improved.

Version 4.0.5

- Language Fix: An issue with swatch names in non-English versions of InDesign has been fixed.
- Free Edition Update: Registration is no longer required for the Free Edition.

Version 4.0.4

- Tint Insertion Point Fix: A crash related to tint insertion points has been fixed.

Version 3.5.1

- Checkbox Enhancements: Properties like font size, rotation, and color have been added to checkboxes.
- Auto Font Size: “Auto” can now be used for font sizes in buttons and forms.
- Improved File Naming: The interactive PDF export file name now defaults to the document label, InDesign file name, or app file name.
- Error Handling: FormMaker is now more robust when documents are closed, and warnings are provided for font application issues.
- Checkbox Styles: Checkboxes in the Buttons and Forms library can now be used to set checkbox styles (check, diamond, square, etc.).

Version 3.5.0

- Official release of version 3.1.5.

Version 3.1.5

- Script Restrictions: Validation, Calculation, and Format scripts are now prevented from being attached to unsupported field types.
- Calculation Script Fixes: Handling of custom calculation scripts has been improved.
- Simplified Field Notation: Acrobat’s “simplified field notation” is now available in FormMaker.
- Overset Text Capture: Overset text in text fields is now correctly captured.
- Calculation Label Cleanup: Unused fields are now removed from calculation labels during PDF export.

Version 3.1.1

- Duplicate Search Fix: A minor fix for a rare issue involving form fields without page items.

Version 3.1.0

- Duplicate Field Fix: An issue where duplicate fields could appear in the field picker has been resolved.
- Calculation Order Dialog: A new dialog for managing the calculation order of fields has been added.

Version 3.0.8

- Format Fixes: Date, Time and Arbitrary Mask formats now carry through properly to the Acrobat properties panel.

Version 3.0.7

- Currency Fix: Currency formatting is now applied correctly.

Version 3.0.6

- Mac Action Script Fix: An issue with action scripts not appearing in the panel on newer macOS versions has been resolved.

Version 3.0.5

- Mac Line Break Fix: An issue related to line breaks on macOS has been fixed.

Version 3.0.4

- High-DPI Fix: The field picker's "OK" button is now visible on high-DPI displays.

Version 3.0.3

- Button Action Fix: Button actions are now correctly carried over.

Version 3.0.0

- FormMaker Assistant is now integrated into FormMaker.
- Rich Text Font Fix: A bug related to Rich Text fonts has been fixed.

Version 3.0

- Event-Driven Interface: A new event-driven interface is being introduced.

Version 2.6.1

- Server Migration Fix: Server migration issues have been addressed.
- Master Page Fix: Form fields on master pages are now supported.

Version 2.6.0

- Expanded Field Support: Rectangles and non-textFrame fields are now supported.
- PDF Export Option: An export to PDF option has been added in the "Success" window.

Version 2.5.5

- Field Formatting Fix: An issue with similarly named fields having different formatting has been resolved.
- Field Rotation Support: Field rotation is now supported.

Version 2.5.0

- Document Script Support: Support for document scripts has been added.

Version 2.0.5

- Radio Button Support: Support for radio buttons has been added.

Version 2.0.1

- Subscription Model: Now a subscription product.
- Checkbox Scripts: Scripts for checkboxes have been added.

Version 2.0.0

- Font Replacement: An option to replace fonts using "FontList.txt."
- UI Fixes: Registration screen and other UI issues have been fixed.
- Zero Insertion Points Fix: A bug with fields having zero insertion points has been addressed.
- Fill Color Fix: A bug related to text fill color set to "None" has been fixed.

Version 1.7.3

- Reserved for special Singapore version with field renaming.

Version 1.7.1

- About button version 1.2 implemented.
- Validation scripts for buttons added.

Version 1.5.1

- Specification of number of comb cells according to number of pipe characters allowed.
- Script label contents of form field copied as “Validation” script.

Version 1.5.0

- Color issues improved (no crash on LAB colors, etc.).

Version 1.4.1

- Problem of missing spaces between spans in rich text fields fixed.

Version 1.4.0

- Support for Rich Text fields added.

Version 1.2.1

- Registration bug for free version fixed.

Version 1.1

- Built-in Acrobat functions used.
- Bug fixed where selection checkmarks don't appear in listbox in ID2020.
